QUALCOMM TO DRIVE COLLABORATION, PRODUCTIVITY AND EFFICIENCY VIA TELEPRESENCE

26 November 2007 — Qualcomm today announced that it will be integrating state of the art Teliris telepresence technology into its R&D program to help drive employee collaboration, productivity and efficiency.

The trial program, which will utilise Teliris's VirtuaLive™ Modular Systems, is designed to foster deeper integration and increased communication between engineers at its headquarters and research facilities.

Barbara Noerenberg, vice president of corporate R&D program management, Qualcomm, comments, "Research and development are cornerstones of Qualcomm's long history of technology innovation, and collaboration among our various remote locations has been an important part of our success.

"Teliris' telepresence solutions provide us with a new layer of communications that will help us bridge the geographic gaps and work more closely across our offices."

Marc Trachtenberg, Teliris CEO, comments, "This trial collaboration demonstrates Qualcomm's commitment to managing a multi-site business in the most streamlined way possible.

"We are thrilled that such a respected technology mainstay recognises the value of telepresence in enhancing their business communications."
