TELIRIS REDEFINES TELEPRESENCE WITH THE INTRODUCTION OF THEIR NEW VIRTUALIVE™ OFFERINGS

Teliris' Fourth Generation Technology Provides Optimum Meeting Solutions With the Most Effective, Natural Collaborative Environment

NEW YORK – October 3, 2006 — Teliris, the leading provider of telepresence solutions, today introduced Virtualive™, its fourth-generation technology product line. The Virtualive™ enhanced technology provides the most natural and intimate virtual meeting environment on the market, and is available in a broad set of room offerings designed to meet the specific needs of its customers.

Building on Teliris' third generation GlobalTable™ telepresence solutions, Virtualive™ provides enhanced quality video and broadband audio, realistically replicating an inperson meeting experience by capturing and transmitting the most subtle visual gestures and auditory cues.

"All future Teliris solutions will fall under the Virtualive™ umbrella of offerings," said Marc Trachtenberg, Teliris CEO. "With such an advanced technology platform and range of solutions, companies can select the immersive experience that best fits their business environment and goals."

Virtualive™'s next generation of Virtual Vectoring™ is at the center of the new offerings. It provides users with unparalleled eye-to-eye contact from site-to-site in multipoint meetings with various numbers of participants within each room. No other vendor offering can match the natural experience created by such advanced technology in such diverse environments.

All Virtualive™ offerings include Teliris' next generation Virtual Vectoring™ technology with enhanced directional audio and optionally include true end-to-end broadcast quality HD throughout every component of the system. This is the first true broadcast quality HD telepresence offering in the industry, further demonstrating Teliris' leadership position in this space. Selective offerings will have the ability to integrate collaboration tools such as a virtual lectern, digital flip chart and DVD/CD replay.

Slated for release later this year, Teliris' Virtualive™ provides two additional solutions: Virtualive™ Modular and Virtualive™ 360. Virtualive™ Modular is a proprietary offering designed to easily fit within a company's existing room configurations and requires a less design-intensive installation process. Virtualive™ 360 provides a full featured

collaboration environment including options such as video and animation editing, storyboard collaboration, music composition editing and a laboratory collaboration environment.

With over a 99 percent level of guaranteed system availability, Teliris' VirtuaLive™ solutions deliver the most realistic telepresence environment available - all transmitted over a secure and fully managed proprietary network.

About Teliris:

Founded in 2001, Teliris develops implements and manages the world's most widely-deployed telepresence systems, realistically replicating the human dynamics of a live meeting. Headquartered in New York and London, the company combines a highly secure, reliable technology platform with a proprietary vectored room configuration, offering businesses a more effective way to communicate and collaborate worldwide. Teliris' clients include Lazard, Pearson plc, GlaxoSmithKline and Vodafone, among others.
